

CLAIMS

1. - Container for a toy comprising different parts, related to a hollow case (1), constituted by at least two semi-cases (1a, 1b), which is closed at the outset and which is used to house the different parts of the toy before being opened, such as different parts hoops (2), connectors (3), sleeves (4), feet (5) and others, characterized in that:
- 10 - the case (1) is provided in its surface by a plurality of holes (10a, 10b), placed in successively way, in at least two concentric circumferences per semi-case (1a,1b), in such a way that said holes (10a,10b) are placed one almost parallel to the next, said holes being capable of being connected by the before mentioned parts, connectors (3), sleeves (4), feet (5) and others, and
- 15 - said parts (3,4,5) include ends, where there are placed lobes in two by two, such as ends configured in such a way that the lobes are adapted to the shape of the case, and in such a way that each one of these parts (3,4,5), when being connected with the respective holes of the case, constitutes a basic part of the mentioned toy comprising different parts.
- 20 2. - A container in accordance to claim 1 characterized in that the mentioned holes can be rectangular (10a) or circular (10b).
- 25 3. - A container in accordance to claim 1 or 2 characterized in that each sleeve (4) has several lobes (17) in one end, in two by two, and placed parallel or

almost parallel, and capable of connecting them in the respective holes (10a) of the case (1), as well as one lobe (16), at least, is capable of fitting into an appropriate part, as for example a foot (5).
